SUMMARY

Computer Engineering student with hands-on experience building backend applications using Java, Spring Boot, Spring Security, PostgreSQL, MongoDB, and REST APIs. Experienced in designing modular backend systems with secure authentication, database design, and layered architecture, along with working knowledge of React and Node.js. Passionate about building scalable and maintainable software.

EDUCATION

Pandit Deendayal Energy University
B.Tech Computer Science and Engineering

- Current CGPA: 9.65

Gandhinagar, Gujarat
2023 – Present

PROJECTS

LiveLog Spring Boot Starter | *Spring Boot, WebSocket, STOMP, Logback*

GitHub

- Developed a reusable Spring Boot Starter that enables real-time application log streaming with zero application code changes.
- Designed auto-configuration using Spring Boot AutoConfiguration and integrated a custom Logback Appender with Spring's event system.
- Implemented asynchronous log broadcasting using WebSocket/STOMP for live browser-based log monitoring.
- Packaged the solution as a plug-and-play starter following Spring Boot starter conventions.

BillSafe | *Spring Boot, Spring Security, PostgreSQL, Redis, Docker*

GitHub

- Built a backend-focused purchase and warranty management platform to securely organize purchase records, invoices, and warranty information through authenticated REST APIs.
- Implemented JWT-based stateless authentication with Spring Security and designed role-ready authorization following clean layered architecture principles.
- Designed a scalable backend architecture with modular components, PostgreSQL persistence, Flyway database versioning, and Redis cache-aside caching for frequently accessed data.
- Developed warranty lifecycle management with expiry tracking, intelligent search, and automated reminder workflows to help users manage purchases and avoid missed warranty claims.
- Containerized the complete application using Docker Compose and designed the backend for future asynchronous notification and analytics services without major architectural changes.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, JavaScript, HTML, CSS

Frameworks: React, Spring Boot, Express.js

Backend Technologies: REST APIs, JPA/Hibernate, Spring Security, JWT, Redis Caching, Layered Architecture, OAuth 2.0, Node.js, Mongoose

Tools: Docker, Git, Redis, Postman, Linux, VS Code, IntelliJ

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP
